

Tips to help you cope with crying:

1. Stay calm and be patient - it could take several minutes for your baby to settle down.
2. Use your baby's cues to try to identify what your baby is telling you.
3. Hold your baby close to your body.
4. Speak softly or sing over and over.
5. Rock, sway or bounce your baby gently over and over.
6. Massage your baby's back, arms, and legs gently.
7. If you start to feel angry or overwhelmed, put the baby down in a safe place for a few minutes and take a break.
8. Ask a friend or family member for help.
9. Contact WIC or your doctor if you think your baby is crying too much.

Why Do Babies Cry?

It can be very upsetting
when babies cry.

Crying is normal, but there are
things you can do to reduce it.

Not-So-Fun Facts About Crying

All babies cry.

Crying is upsetting for a reason - to make caregivers want to help.

Babies cry for many reasons, not just because they are hungry.

When you try to help, it may take awhile for them to calm down. Babies need some time to respond.

The average 6-week-old baby cries for about two hours per day.

Babies cry less and less as they get older.

Babies Cry for Many Reasons

Sometimes it is easy to know what your baby needs (like a diaper change!). Other times it seems like babies cry for no reason at all.

Watch for these cues to learn why your baby is crying...

If your baby is hungry, he might:

- Make sucking noises
- Pucker his lips
- Keep his hands near his mouth

If your baby needs a break from what's going on around her, she might:

- Turn or push away
- Stretch out her fingers
- Have tense muscles in her face and body

Many times babies show cues before they start crying. Watching for these cues and helping your baby be more comfortable is a good way to reduce crying.

Dear Colleague,

The Washington State Department of Health (DOH) provides print-ready files (PDFs) of health education materials. To ensure that the original quality of the piece is maintained, please read and follow the instructions below and the specifications included for professional printing.

- **Use the latest version.** DOH materials are developed using the most current information available, are checked for clinical accuracy, and are field tested with the intended audience to ensure they are clear and readable. DOH programs make periodic revisions to educational materials, so please check this web site to be sure you have the latest version. DOH assumes no responsibility for the use of this material or for any errors or omissions.
- **Do not alter.** We are providing this artwork with the understanding that it will be printed without alterations and copies will be free to the public. Do not edit the text or use illustrations or photographs for other purposes without first contacting us. Please do not alter or remove the DOH logo, publication number or revision date. If you want to use a part of this publication for other purposes, contact the Office of Health Promotion first.
- **For quality reproduction:** Low resolution PDF files are intended for black and white or color desktop printers. They work best if you are making only one or two copies. High resolution PDF files are intended for reproducing large quantities and are set up for use by professional offset print shops. The high resolution files also include detailed printing specifications. Please match them as closely as possible and insist on the best possible quality for all reproductions.
